Profile

Results-driven Project Manager with 5+ years of experience leading cross-functional teams and delivering end-to-end digital products on time and within scope. Strong background in full-stack JavaScript development (MERN stack, Next.js, Nest JS) with hands-on exposure to AWS cloud services, enabling effective communication between technical and business stakeholders. Passionate about transforming ideas into scalable, user-centric solutions through structured planning, agile methodologies, risk management, and outcome-focused execution.

Experience

BVM INFOTECH | JUNE 2022 – present (FULL-TIME)

- leading end-to-end delivery of multiple web and cloud-based projects
- Planned project scope, timelines, milestones, and resource allocation while ensuring alignment with business goals
- Later took on team responsibilities — guiding junior developers and helping manage project delivery
- Led and mentored cross-functional teams, including frontend, backend, and QA engineers, to maintain consistent delivery standards
- Acted as the primary point of contact between stakeholders and technical teams, translating business requirements into clear execution plans
- Oversaw cloud-based deployments and release management on AWS, ensuring system reliability and scalability
- Managed integrations with third-party services such as payment gateways (Razorpay, Stripe), ensuring secure and compliant delivery

HOPIANT PRIVATE LIMITED | JUNE 2020 – MAY 2022

- Transitioned from Web Developer to Project Manager, leading planning, execution, and delivery of web-based projects from concept to production
- Coordinated cross-functional teams (frontend, backend, QA, and stakeholders) to ensure timely and high-quality project delivery
- Defined project scope, timelines, milestones, and resource allocation while managing changing requirements and priorities
- Acted as a technical bridge between development teams and business stakeholders, ensuring clarity in requirements and implementation
- Oversaw deployments and release management, ensuring smooth production rollouts and minimal downtime

Education

BSC.IT | S.S.S.D.I.IT JUNAGADH GUJARAT

Projects

Steer Health | Project Manager (Healthcare Platform)

- Led end-to-end delivery of a healthcare web platform focused on doctor listings, appointment booking, and medicine management
- Defined project scope, requirements, timelines, and milestones in collaboration with healthcare stakeholders and internal teams
- Coordinated frontend, backend, and cloud resources to deliver a seamless, user-centric experience
- Managed implementation of location-based doctor search and specialty filtering to improve patient accessibility and platform usability
- Oversaw cloud architecture and deployments using AWS Serverless (Lambda, API Gateway, DynamoDB, S3), ensuring scalability, security, and cost efficiency
- Ensured secure handling of sensitive healthcare data through structured API design, authentication flows, and compliance-aware practices
- Monitored project risks, resolved technical blockers, and maintained delivery quality across multiple releases

ADF Exchange | Project Manager (Crypto & Digital Payments Platform)

<https://adftechnology.com>

- Led delivery of a real-time crypto transaction platform supporting secure digital payments, wallet transfers, and transaction dashboards
- Defined project scope, technical requirements, milestones, and delivery timelines for payment flows, order management, and transaction monitoring features
- Coordinated backend, frontend, and infrastructure teams to ensure reliable real-time transaction processing and high system availability.
- Oversaw implementation of queue-based transaction processing to improve performance, consistency, and fault tolerance
- Managed integration of third-party crypto services (e.g., wallet and transfer APIs), ensuring secure and compliant payment workflows
- Facilitated peer reviews, technical discussions, and cross-team knowledge sharing to improve code quality and delivery speed.
- Drove adoption of scalable frameworks and architecture decisions to enhance system performance, maintainability, and long-term growth
- Ensured alignment between product goals, technical execution, and business priorities in a fast-paced fintech environment

Pulp Tracking | Project Manager (Industrial Monitoring System)

- Led delivery of a real-time industrial tracking system for monitoring pulp movement, fiber line data, and mill operations
- Defined project requirements, milestones, and delivery timelines in collaboration with plant stakeholders and engineering teams
- Coordinated frontend, data, and integration teams to deliver accurate real-time visualizations and operational dashboards
- Oversaw development of interactive process flows and machinery representations to improve system clarity and operator understanding
- Managed implementation of alarm and alert mechanisms based on operational thresholds to support timely decision-making
- Ensured integration of parameter monitoring, reporting, and analytics modules for actionable operational insights
- Focused on UI/UX quality for complex industrial data, improving usability, adoption, and operator efficiency

Pulp Optimizer | Team Lead

- Led the frontend team in delivering a predictive analytics extension of the Pulp Tracking system, focused on real-time pulp and fiber line forecasting
- Guided the team in building interactive visualizations for tank levels, flow forecasts, and predicted vs actual performance metrics
- Planned task breakdowns, sprint priorities, and feature delivery in alignment with project goals
- Ensured consistency in frontend architecture, state management, and UI responsiveness across complex real-time and predictive modules
- Collaborated closely with backend engineers and domain experts to translate predictive data into intuitive, operator-friendly interfaces
- Reviewed code, mentored team members, and resolved technical blockers to maintain quality and delivery timelines
- Improved team efficiency and product reliability through clear communication, ownership, and hands-on leadership

Wishlink | Frontend Developer (Next JS)

- Developed a full-stack creator-commerce platform enabling influencers to create personalized storefronts, manage affiliate product links, and automate audience engagement.
- Built features such as product sourcing, brand integrations, real-time analytics, automated comment-reply workflows, authentication, and creator dashboards.
- Improved user flows and optimized performance across the creator onboarding and campaign-management modules.
- Engineered backend services for creator onboarding, product sourcing, campaign tracking, and automated engagement workflows using Node.js, Express, and MongoDB.
- Implemented secure APIs, session/auth flows, scalable data models, and brand-creator integration pipelines. Optimized data queries and improved system scalability for high-traffic creator operations.
